

Digital Dictation Software

Introducing Lexacom

Lexacom developed the original, first generation digital dictation software in 1997. Since that landmark moment, we have used our core skills in technical innovation and problem solving to establish Lexacom as the leading digital dictation specialist in the healthcare sector.

As the pioneer of digital dictation technology, we are continuing our ongoing product development programme by launching the latest version of our innovative software in 2011, making the transition from traditional analogue tapes to a modern, efficient and transparent system even easier.

Our latest v3 software sets new standards for technical excellence and offers many benefits to LMC members:

- Widespread compatibility and integration with clinical systems
- ‘Cloud’ solution - dictate wherever and whenever you like
- Scalability - suitable for small clinics or large hospitals
- Real-time referral analysis

- Easy to install and use
- Software evolves with workplace system requirements
- Secure communication platform
- Big cost savings on admin time - up to 50%
- Proven to deliver huge increases in productivity
- Apps for leading mobile devices and VR coming soon
- Gives complete transparency/visibility of all work practises and work loads
- Allows productivity and efficiency to be measured effectively

Our versatile software will meet and often surpass all of your transcription or workflow operating requirements.

What our customers say:

“...Lexacom has given us the transparency that is vital in a busy medical environment. Patient information is easy to access and handle...”

“Switching to Lexacom has definitely given our workflow efficiency a boost and the software is a good match for our requirements...”

“...Lexacom has revolutionised the way we manage our administration...”
